

# **TRIOLECTRIC QUICK**

## **ELECTROCLEANER/ OIL FREE/QUICK DRY**

**TRIOLECTRIC,QUICK;** It is a solvent-based fast volatile cleaning product used to remove oil, dirt, soot and carbon deposits of electric motor equipment such as electric motors, generators, coils, etc.

### **PRODUCT FEATURES AND BENEFITS**

- It is fast volatile.
- It is anti-corrosive and completely evaporates after cleaning without leaving any deposits on the surface.
- It has fast penetrating property.
- Suitable for use on all kinds of goods surfaces and equipment.
- It is easy to use and economical.
- It is non-flammable and should be ventilated during application.

### **DOSAGE AMOUNT AND INTENDED USE**

The product should be used as a concentrate without being diluted with water. Application methods are spraying, wiping and immersion methods.

**Spraying Method:** The concentrated product is sprayed onto the electrical engine or engine part equipment. Drying with air should be provided after cleaning.

**Immersion Method:** The disassembled parts are immersed in the concentrated chemical and expected to react for 15-20 minutes. The time can be adjusted depending on the amount of pollution. After cleaning, the parts should be dry by holding air.

**Note:** It may damage some insulation materials such as chemical rubber and plastics. It is recommended to remove plastic and rubber materials before cleaning or their usability should be tested by the user before cleaning.

**NOTE:** Please review the MSDS reports before use for safety, occupational health and safety.
