

TRIOYAK-20

FUEL ADDITIVE-COMBUSTION IMPROVER

TRIOYAK-20; It is a concentrated combustion improver developed for heavy fuel oils. The catalysts in it react with heavy fuel particles during combustion, enabling complete combustion.

PRODUCT FEATURES AND BENEFITS

- It prevents the formation of sludge with its anti-polymerized feature. It also stabilizes the fuel with its emulsifying feature.
- It facilitates combustion by reducing the flash point of the fuel.
- It improves fuel efficiency.
- It prevents carbon generation and accumulation on the combustion surface.
- It reduces the amount of smoke and the formation of exhaust particles.
- It prevents acid and low-temperature corrosion.

DOSAGE AMOUNT AND INTENDED USE

The most suitable method to be completely absorbed by the fuel is to give it to the fuel pipe with the help of a dosing pump. If this method is not possible, it should be poured directly into the fuel tank before the fuel is taken into the tanks.

The amount of use of **TRIOYAK-10** is 1 lt for 4-6 tons of fuel.

The amount of use in frozen fuels is 3-5 liters for 1 ton of fuel.

NOTE: Please review the MSDS reports before use for safety, occupational health and safety.
