

TRIO TAS

DESCALING LIQUID

TRIO-TAS; It is an inhibitor-reinforced acid-based concentrated product used to remove lime and rust deposits formed by water in steam boilers, hot water boilers, condenser, cooling systems and pipelines.

PRODUCT FEATURES AND BENEFITS

- Thanks to the inhibitors it contains, it does not cause corrosion on the surface it is applied.
- With its strong acidic structure, it effectively dissolves lime and rust deposits.
- It can be applied to all metals except for sensitive metals such as aluminium, zinc, copper, galvanizing etc.
- No damage to plastic components and O-rings.
- It is a concentrated product and has a multi-purpose use rate.
- Suitable for use for evaporator cleaning.
- As it is a smoky product, appropriate ventilation conditions have to be met during use.

DOSAGE AMOUNT AND INTENDED USE

The dilution rate varies depending on the amount of lime and rust. Suitable for use with circulation, immersion and brushing-spraying method.

Before the cleaning process, oil, grease, carbon deposits, if any, should be cleaned with our TRIO-WABAC product.

Spraying-Brushing: It can be used concentrated or diluted up to 5-20% depending on the amount of lime and rust. After applying the solution to the surface, wait 5-10 minutes and rinse with pressurized water and neutralize.

Immersion: Depending on the pollution rate, it is possible to concentrate or dilute up to 5-20%. The disassembled parts are immersed in the solution and the cleaning time is determined by visual monitoring. After cleaning, rinse with plenty of water and neutralize.

Circulation Method: It is used for cleaning lime and corrosion deposits formed in heat exchangers. It is used concentrated or diluted up to 5-10% depending on the pollution rate. Cleaning time can be extended up to 18-20 hours depending on the amount of pollution. After cleaning, rinse with plenty of water and neutralize.

NOTE: Please review the MSDS reports before use for safety, occupational health and safety.
