

TRIO BRIGHT PLUS

METAL BRITE

TRIO-BRIGHT PLUS is a concentrated product consisting of a mixture of surfactants and acids used to polish metal surfaces.

PRODUCT FEATURES AND BENEFITS

- Thanks to the corrosion inductors it contains, it does not cause corrosion.
- No damage to plastic components.
- It is also effectively used for cleaning rust and rust stains.
- Suitable for use in sensitive metals such as aluminium, zinc, copper and galvanizing. (Contact time should be 5 min and product concentration should be 10-20%.)
- It also removes oil and dirt deposits on the surface with the surfactants it contains.
- It prevents the formation of corrosion by passivation.

DOSAGE AMOUNT AND INTENDED USE

The dilution rate may vary depending on the amount of rust and the type of metal. Concentrate can be used to polish iron and steel surfaces, it should be diluted up to 30-40% on worn surfaces.

The product should be used in 10-20% concentration in sensitive metals such as aluminium, zinc, copper and galvanizing.

NOTE: TRIO-BRIGHT PLUS should be rinsed with plenty of water before drying on surfaces as it may leave white deposit during cleaning.

NOTE: Please review the MSDS reports before use for safety, occupational health and safety.
