

TRIO ALKALINITY CONTROL

BOILER WATER pH ADJUSTER

TRIO-ALKALINITY CONTROL is a concentrated alkaline liquid used to increase the low pH value that may occur in steam and boiling water boilers. It provides corrosion and deposition control in boiler waters. It gives alkalinity to the boiler water and brings the pH value in the boiler water to the ideal ranges.

PRODUCT FEATURES AND BENEFITS

- It prevents punctures, bursts and blockages in regular use and keeps maintenance costs to a minimum.
- It saves energy by preventing corrosion and punctures as it will keep the pH of the boiler water at an ideal level in regular use.
- It extends the life of boiler equipment and parts.
- It reduces maintenance and operating costs.

DOSAGE AMOUNT AND INTENDED USE

The mode of application varies according to boiler type and boiler pressure. The dosing is adjusted by measuring the boiler water pH value. **TRIO-ALKALINITY CONTROL** product is also used to neutralize the pH of the medium after acid cleaning with **TRIO-STAGE** (sediment removal compound).

NOTE: Please review the MSDS reports before use for safety, occupational health and safety.
