

TRIOKIN-DS

MICROORGANISM CONTROL

TRIOKIN-DS; It is a concentrated product used for the cleaning of microorganismic contaminants in sea water cooling systems.

PRODUCT FEATURES AND BENEFITS

- Microbiological and macrobiological creatures all kill.
- It has a large area of influence and use.
- It is used to clean the system before beginning the microbiological treatment program.
- In places where microorganism pollution is high, it is necessary to apply shock to control the system.

DOSAGE AMOUNT AND INTENDED USE

It should be given to the system in the form of 10 kg TRIOKIN-DS shocking with the help of a dosing pump from the filter behind the chest of the kinistin in the first use to solve the microorganismic pollution formed in the chest of the kinistin.

After 2 hours after the shock, the deposits (mussels, etc.) dissolved with air should be thrown out and the filters should be cleaned.

This process must be done once a week until the cleaning process is completed in the system.

NOTE: Please review the MSDS reports before use for safety, occupational health and safety.
