

TRIO EVAPTREAT

EVAPORATOR TREATMENT & ANTI-CORROSION

TRIO-EVAPTREAT is a concentrated liquid product used as a corrosion and foam preventive in low and high pressure fresh water systems with the help of active polymers and foam cutter chemicals. Thanks to the active polymers in its content, it is used as a winter preventive as well as removing the existing winter and eliminates the need for cleaning. It protects heat transfer surfaces and keeps solids in water suspended. Thanks to the foam cutters in its content, it prevents the carry-over event.

PRODUCT FEATURES AND BENEFITS

- In regular use, it prevents lime and sludge that may occur in the evaporator and minimizes maintenance costs.
- It cleans the heat transfer surfaces and ensures that the evaporator operates at maximum efficiency.
- It increases the distillation quality with foam prevention feature.
- It is concentrated, easy, safe and economical to use.

DOSAGE AMOUNT AND INTENDED USE

If TRIO-EVAPTREAT application has not been initiated, the first dosage varies between 200 gr. for 1 ton of water and 30-100 gr. for 1 ton of water depending on the quality of the feed water.

NOTE: Please review the MSDS reports before use for safety, occupational health and safety.
