

# **TRIO MAXI SHINE**

## **POLYMER BASED FLOOR POLISH**

**TRIO MAXI SHINE** is a polymer-based polish formulated for polishing PVC, marley, linollium, rubber, epoxy, plastic, artificial and natural stone-looking floors.

### **PRODUCT FEATURES AND BENEFITS**

- It is a long-lasting, bright, hard, durable ideal floor polish for floors where human traffic is intense.
- It provides extra polish.

### **DOSAGE AMOUNT AND INTENDED USE**

Preparatory cleaning process:

All oil, dirt and worn wax should be removed from the surface with a wax remover. Then, the surface is rinsed with clean water. Dirty water is sucked out with vacuum and the floor is allowed to dry.

Polishing Process:

1 kg of polish is spread on the floor with a damp polish mop or glass plush to cover an area of 40 – 75 m<sup>2</sup>. Leave to dry for ½ hour to apply a second coat. A third coat is recommended to achieve more vivid and long-lasting brightness. It is recommended to polish the polished and dried floor using a white pad with a high-speed polishing machine.

After wax care:

Daily cleaning is performed with polished cleaning and maintenance agent to ensure a long life of the polished surface.

Caution! Wax should not be applied again without drying the previously polished surface. Foot contact must not be made on the polished surface without ensuring full drying.

**NOTE: Please review the MSDS reports before use for safety, occupational health and safety.**
