

TRIOYAK-300

ANTI-GEL COLD WEATHER OIL TREATMENT

TRIOYAK-300; It is an additive chemical that prevents freezing by reducing the freezing point of fuel in cold winter conditions in marine diesel fuels. It contributes to the high performance operation of diesel engines in cold winter conditions.

PRODUCT FEATURES AND BENEFITS

- It lowers the freezing temperature in the fuel lines to -40°C.
- It facilitates combustion by preventing carbon formation in fuel tanks and fuel system.
- It reduces the amount of smoke and the formation of exhaust particles.
- It prevents acid and low-temperature corrosion.

METHODS OF APPLICATION AND INTENDED USE

It should be given regularly from the fuel line with the help of a dosing pump. If this method is not possible, it should be poured directly into the fuel tank without taking the fuel into the tanks. The amount of use of **TRIOYAK-300** is 1 lt for 5 tons of fuel.

NOTE: Please review the MSDS reports before use for safety, occupational health and safety
