

TRIO T-WELL YAK-750 LOW SULPHUR

Lubricity Improver

YAK-750 LOW SULPHUR; It is a new generation of concentrated fuel additive specially designed for lubricating properties and eliminating the loss of lubrication in low and ultra-low sulphur fuels. Due to the lubricating properties of sulfur in fuels with high sulfur content, wear between engine parts during combustion will be much less. However, fuels containing less than 1% sulphur cause greater wear and tear on engine equipment, fuel pumps and injector systems. The product protects the engine against wear by increasing the lubrication properties of low sulfur fuels without changing the sulfur content in the fuel.

PRODUCT FEATURES AND BENEFITS

- It is a very effective contribution in foreign oil and gas oil.
- It provides a high level of lubrication.
- It contributes to fuel economy by dissolving carbon deposits in injectors.
- It provides effective protection against wear and corrosion.
- It is a completely ashless and organic product.
- It prevents unplanned and expensive maintenance.

DOSAGE AMOUNT AND INTENDED USE

It should be given regularly from the fuel line with the help of a dosing pump. If this method is not possible, it should be poured directly into the fuel tank before the fuel is taken into the tanks.

The amount of use of **YAK-750 LOW SULPHUR** is 2-4 lt for 20 tons of fuel.

NOTE: Please review the MSDS reports before use for safety, occupational health and safety.
