

TRIO RUCON-X

RUST CONVERTER

TRIO-RUCON-X is a chemical substance that converts rust (iron oxide) into a primer by applying it to rusty surfaces with its special formulation. The product is not a rust remover, it is a rust converter. It is formed in rust layers and must be disposed of before many operations. Sanding, wire rubbing, scraping may not completely remove rust and may cause corrosion under the new paint film. However, **TRIO-RUCON-X** ensures that the rust formed is completely transformed into a primer and prevents the formation of new rust. The forward formula neutralizes rust to form a protective layer and stop corrosion.

PRODUCT FEATURES AND ADVANTAGES

- It shows its functionality by penetrating very quickly.
- It protects valuable components and extends their life.
- There is no need for processes such as acidification, scraping, grinding, sandblasting.
- It does not require mixing and surface treatment.

DOSAGE AMOUNT AND INTENDED USE

Use directly without diluting the product. It is sprayed on the surface to be applied and/or applied with a brush-roll.

After waiting for 10-15 minutes, it is observed that the rust turns into a primer due to the discoloration on the surface.

NOTE: Please review the MSDS reports before use for safety, occupational health and safety.
