

# **TRIO PWS-L**

## **POTABLE WATER STABILIZER / LIQUID**

**TRIO-PWS/LIQUID;** It is a mixture of polyphosphates that stabilize drinking water. It prevents “red water” by providing corrosion control in the drinking water systems of the vessel. It also prevents the formation of lime and corrosion in hot water tanks, cooling systems and water tanks.

### **PRODUCT FEATURES AND ADVANTAGES**

- It prevents “red water” in the drinking water systems of the vessel.
- Pipelines prevent corrosion and lime formation in heating and cooling systems.
- The presence of liquid facilitates the use and dosage of the product.
- It reduces maintenance costs and extends system life.

### **DOSAGE AMOUNT AND INTENDED USE**

The dosage amount is 10 ml per ton. (10 ppm) Dosing pump or manual dosing can be performed.

**NOTE: Please review the MSDS reports before use for safety, occupational health and safety.**
